

TECNIPESA HARD TAG

TAILOR-MADE
MANUFACTURING

ROBUST RFID
TAGGING

PILOT TESTS

HARD TAGs are robust tags for industrial use with more encapsulation options than other RFID tags. They withstand the most adverse conditions. We provide you with the TAG type that best suits your application.

Our HARD TAGs work with the following frequencies: HF (13.56MHz), NFC (13.56MHz ISO 14443 A NFC Forum) and UHF (860-960MHz).
Complying with the main international standards.

Depending on the label memory required by your company, we can provide you with different inlay brands: Impinj, Alien, NXP, etc.

These labels are specially designed for use in material identification processes, asset control, product tracking, box or pallet return supervision, among others.

Technical Specifications

- > Dimensions: Depending on the selected encapsulation.
- > Materials: High-strength plastics, as required.
- > Attachment Method: Riveting, embedding, flanging, adhesive, inserting, screwing...
- > Resistance and Temperatures: -40°C - +250°C.
- > Inlay types: Impinj, Alien, NXP, etc.
- > Frequency: HF (NFC) and UHF.
