TEXTILE LABELLING

PILOT TESTS

RFID Textile Tags are designed to withstand a multitude of washes and to be durable. They are ideal for sectors such as textiles, hospitality and healthcare.

We carry out pilot tests in those projects that require it.

Our RFID tags for textiles work with the following frequencies: HF (13.56MHz), NFC (13.56MHz ISO 14443 A NFC Forum) and UHF (860-960MHz). Complying with the main international standards.

Depending on the label memory required by your company, we can provide you with different inlay brands: Impinj, Alien, NXP, etc.

These labels are specially designed for garment traceability processes and product control when taken to the laundry, among others.

Technical Specifications

- › Dimensions: Fully customisable, according to needs.
- › Materials: Polyamide, washable, various...
- › Attachment Method: Thermo-adhesive, stitched...
- › Resistance and Temperatures: According to the specifications of the selected material.
- › Inlay types: Impinj, Alien, NXP, etc.
- › Frequency: HF (NFC) and UHF.
